A Tool for ACH Professionals

ACH FileFox is a standalone application that allows users to manipulate ACH files directly. It is a comprehensive ACH utility for anyone involved in ACH, including regulators, financial institutions and Corporations.

Directly access ACH Files in their native form. ACH FileFox is "ACH Aware" so there is no need to use any other program.

The screenshot displays the ACH FileFox application window. The main area shows a list of ACH entries with columns for line number, entry type, amount, and name. A context menu is open over the entry for BEVERLY BRYAN, showing options like Cut, Copy, Paste, Delete, Select All, Select Batch, Select Entry, Select Addenda, Insert Batch, Merge Batches, Split Batches..., Change Effective Date..., Create Offsets..., Insert Entry, Create Return..., and Insert Addenda. At the bottom, a Journal window shows a list of messages with columns for No., Time Stamp, and Message.

Familiar editing features such as bookmarks, line numbers and collapsible regions aid in the detailed study of files.

As the cursor moves around the ACH File, the fields for each row are shown and the selected field is highlighted.

The context menu is always available and shows commands that make sense for the selected location.

Detailed information about the file and the current location in the file is shown in the status line.

Quickly locate issues by clicking a Journal entry.

ACH FileFox Features

ACH FileFox is a full-featured ACH Editor with a wide array of tools for composing, repairing, searching, and manipulating NACHA-formatted files.

Unlike a standard text editor, ACH FileFox knows what to do when it comes to editing ACH data. As you make changes, batch totals and hashes are automatically re-computed on the fly. Cut, Copy, and Paste ACH data just like you work with other documents. ACH FileFox takes care of the details to ensure that you produce only valid NACHA files.

ACH FileFox features a collection of tools that make it easier for you to exchange data with other people and applications. Import ACH data from spreadsheet applications and automatically convert it to NACHA format. Repair minor errors that frequently appear in files produced by end-user programs.

Once your data is in NACHA format, ACH FileFox gives you a suite of tools to validate and verify the data. Perform an OFAC sweep of an IAT file. Check all routing numbers against the Federal Reserve Bank's ACH routing directory. Even write your own custom rule to validate ACH file content against business rules.

Whatever you need to do with an NACHA file, ACH FileFox can do it!

Feature
